

New Installers App will cut engineers testing time and costs by 25%

Today saw the launch of Traceall Global's **new Installers App** designed to provide engineers with a simple one-step process to check the equipment install has worked at the point of installation.

Event	CreateDate	TempProbe1
Time Interval Report	03/03/2016 08:03:24	-17.66
Time Interval Report	03/03/2016 07:03:01	-18.68
Time Interval Report	03/03/2016 06:02:37	-18.37
Time Interval Report	03/03/2016 05:02:13	-18.31
Time Interval Report	03/03/2016 04:13:39	-18.81

The App enables engineers to check door open/door close; temperature probe and the camera functionality which manages the stock planogram before leaving the site, providing significant efficiencies for the installer teams working across multiple sites. By flagging errors, the engineer can make adjustments and fixes at source rather than back at head office or having to make additional trips to the customers' location, cutting the paperwork, time and costs taken for an average installation by 25%.

Jim Comerford, Director of IT at Traceall Global said, "This evolution of technology was instrumental in driving efficiencies within the installation process which could be costly and time consuming. As a business, we are focused on driving sustainability efficiencies for our clients so this is another excellent example of how this can be achieved."
